

Abstract

A token schema is provided for identifying a broadcast audio and/or visual program to facilitate recording of the identified program. The token schema includes program criteria for identifying a corresponding audio/or visual program, which is sufficient to enable a recording system that receives the token to record the identified program based on the token. A token also represents an audio and/or visual program in a form that may be sent to one or more recipients, such as part of an email message or by other data transport mechanisms.
